The present invention describes an agonist (A) of apolipoprotein A-I applay which is a 14-22 residue peptide, or analog, that forms an amphipathic alpha-helix in presence of lipids. (A), and their lipid complexes, are used to treat or prevent diseases associated with dyslipidemia, specifically hypercholesterolaemia, cardiovascular disease. Apolipoprotein A-I; agonist; dyslipidemic disorder; dyslipidemia; human; lecithin:cholesterol acyltransferase; LCAT; hypercholesterolaemia; cardiovascular disease; atherosclerosis; restenosis; HDL; apoA-I; high density lipoprotein; hypertriglyceridemia; metabolic syndrome; septic shock. The present invention describes an agonist (A) of apolipoprotein A-I (apoA-I) which is a 15-29 residue peptide, or analog, that forms an amphipathic alpha-helix in presence of lipids. (A), and their lipid complexes, are used to treat or prevent diseases associated with dyslipidemia, specifically hypercholesterolaemia, cardiovascular disease, atteroscierosis, restenosis, HDL (high density lipoprotein) or apoA-I deficiency; hypertriglyceridemia and metabolic syndrome, also for treating septic shock. When labeled, (A) can also be used diagnostically to measure serum levels of HDL, in particular the HDL subpopulation that is involved in retrograde cholesterol transport, also to image HDL at e.g. atherosclerotic streaks, and to raise antibodies. Y18934 to Y19187 represent lecithin:cholesterol acyltransferase (LCAT) activity Lecithin:cholesterol acyltransferase activation exhibiting peptide #130. ä The present invention describes a nucleic acid (A) encoding an apolipoprotein A-I (apoA-I) agonist (B) that is a peptide, or analog, which forms an amphipathic alpha-helix in presence of lipids. (A), optionally as a complex with lipids, and host cells that contain (A), are useful for gene therapy, or prevention, of diseases associated with dyslipidemia, specifically hypercholesteroleamia, cardiovascular disease, atherosclerosis, restenosis, HDL (high density lipoprotein) and apoA-I deficiency, hypertriglyceridemia and metabolic syndrome, also to treat to study the role of apoA-I in lipid metabolism. (B) can also be used diagnostically, e.g. to measure serum HDL (particularly its atherosclerosis, restenosis, HDL (high density lipoprotein) or apoA-I deficiency; hypertriglyceridemia and metabolic syndrome, also for treating septic shock. When labeled, (A) can also be used diagnostically to measure serum levels of HDL, in particular the HDL subpopulation that is involved in retrograde cholesterol transport, also to image HDL at e.g. atherosclerotic streaks, and to raise antibodies. Y18680 to X18933 represent lecithin:cholesterol acyltransferase (LCAT) activity exhibiting core peptides, which are apoA-I agonists. Lecithin: cholesterol acyltransferase activation exhibiting peptide #130. The pulmonary surfactant protein is generated by cleavage of a larger precursor protein synthesised by pulmonary type II epithelial cells and affects the surfactant like activity of phospholipids. The peptide shown is a c-terminal fragment (residues 63-78) which can be used for the treatment of pulmonary surfactant deficient diseases, including hyaline membrane disease, and/or abnormal states, including acute respiratory distress syndrome and can also be used for drug delivery systems.
                                                                                                                                                                                                                                                                                                        SP-B; surfactant; phospholipids; pulmonary type II epithelial cells; hyaline membrane disease; acute respiratory distress syndrome; pulmonary drug delivery.

(A), and their lipid complexes, are used to treat or prevent diseases associated with dyslipidemia, specifically hypercholesterolaemia, cardiovascular disease, atherosclerosis, restenosis, HDL (high density lipoprotein) or apoa-I deficiency; hypertriglyceridemia and metabolic syndrome, also for treating septic shock. When labeled, (A) can also be used diagnostically to measure serum levels of HDL, in particular the HDL subpopulation that is involved in retrograde cholesterol transport, also to image HDL at e.g. atherosclerotic streaks, and to raise antibodies. Yi9188 to Y19441 represent lecithin:cholesterol acyltransferase (LCAT) activity exhibiting core peptides, which are apoA-I agonists.
                                                                                                                                                                                                                                                                                                                                                                Apolipoprotein A-I; agonist; dyslipidemic disorder; dyslipidemia; human; lecithin:roblesterol acyltransferase; LGMT; hypercholesterolaemia; cardiovascular disease; atheroseclerosis; restenosis; HDL; apoA-I; high density lipoprotein; hypertriglyceridemia; metabolic syndrome;

                                                                                                                                                                                      The pulmonary surfactant protein is generated by cleavage of a larger precursor protein synthesised by pulmonary type II epithelial cells and affects the surfactant like activity of phospholipids. The peptide shown is a clerent integrant (residues 58-78) which can be used for the treatment of pulmonary surfactant deficient diseases, including hyaline membrane disease, and/or abnormal states, including acute respiratory distress syndrome and can also be used for drug delivery systems.
                                                                                       Compsn. having surfactant activity when admixed with phospholipid - comprising pulmonary surfactant protein fragments, used in formulations for respiratory distress syndrome treatment
                                                                                                                                                                                                                                                                                                                                                                                                   DB 14; Length 21;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The monoclonal antibody is useful in the purification and isolation of human erythropoletin from plasma by affinity chromatography. It as also useful in immunosasays on human body fluids for erythropoletin determination, e.g. in the diagnosis of hypoxia etc. involving low or defective red blood cell prodn.
                                                                           Sequence from erythropoietin used to produce monoclonal antibodies from cell line ATCC HB 8209.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                Monoclonal antibody from hybridoma ATCC HB 8209 – useful for
purificn. and assay of human erythropoietin

                           (apoA-1) Which is a 15-29 residue peptide, or analog, that forms an amphipathic alpha-helix in presence of lipids. (A), and their lipid complexes, are used to treat or prevent diseases associated with dyslipidemia, specifically hypercholesterolaemia, cardiovascular disease, atherosclerosis, restenosis, HDL (high density lipoprotein) or apoA-1 treating septic shock. When labeled (A) can also be used diagnostically to measure serum levels of HDL, in particular the HDL subpopulation that is involved in retrograde cholesterol transport, also to image HDL egg. atherosclerotic streaks, and to raise antibodies. Y18934 to Y19187 represent lecithin:cholesterol acyltransferase (LCAT) activity

ö
dyslipidemia, specifically hypercholesterolaemia, cardiovascular disease, atherosclerosis, restenosis, HDL (high density lipoprotein) or apoA-I deficiency; hypertriglyceridemia and metabolic syndrome, also for treating septic shock. When labeled, (A) can also be used diagnostically to measure serum levels of HDL, in particular the HDL subpopulation that is involved in retrograde cholesterol transport, also to image HDL at the recognition that is involved in retrograde cholesterol and to raise antibodies. Y18680 to Y18933 represent lecithin:cholesterol acyltransferase (LCAT) activity exhibiting core peptides, which are apoA-I agonists.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   apolipoprotein A-I (apoA-I) agonist (B) that is a peptide, or analog, which forms an amphipathic alpha-helix in presence of lipids. (A), or orthonorial sa a complex with lipids, and host centals that contain (A), are useful for gene therapy, or prevention, of diseases associated with dyslipidemia, specifically hypercholesterolaemia, cardiovascular disease, atheroscierosis, restenosis, HDL (high density lipoprotein) and apoA-I deficiency, hypertriglyceridemia and metabolic syndrome, also to treat endotoxemia (septic shock). Host cells containing (A) can also be used to study the role of apoA-I in lipid metabolism. (B) can be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Lecithin: cholesterol acyltransferase activation exhibiting peptide #40.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

(A), and their lipid complexes, are used to treat or prevent diseases associated with dyslipidemia, specifically hypercholesterolaemia, cardiovascular disease, atherosclerosis, restenosis, HDL (high density lipoprotein) or apoA-I treating septic shock. When labeled, (A) can also be used diagnostically to measure serum levels of HDL, in particular the HDL subpopulation that is involved in retrograde cholesterol transport, also to image HDL at represent lecithin:cholesterol acyltransferase (LCAT) activity exhibiting core peptides, which are apoA-I agonists.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Apolipoprotein A-I; agonist; dyslipidemic disorder; dyslipidemia; human; lecithin:roblesterol acyltransferaes; LCAT; hypercholesterolaemia; cardiovascular disease; atheroscleroslis; restenosis; HDL; apoA-I; high density lipoprotein; hypertriglyceridemia; metabolic syndrome;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Lecithin: cholesterol acyltransferase activation exhibiting peptide #40
diagnostically, e.g. to measure serum HDL (particularly its subpopulation involved in retrograde cholesterol transport) and for imaging the circulatory system or HDL accumulations at fatty streaks. The present sequence represents a peptide from the present invention.
                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      present invention describes an agonist (A) of apolipoprotein A-I

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes an agonist (A) of apolipoprotein A-I (apoA-I) which is a 15-29 residue peptide, or analog, that forms an amphipathic alpha-helix in presence of lipids. (A), and their lipid complexes, are used to treat or prevent diseases associated with dyslipidemia, specifically hypercholesterolaemia, cardiovascular disease, atherosclerosis, restenosis, HDL (high density lipoprotein) or apoA-I deficiency; hypertriglyceridemia and metabolic syndrome, also for treating septic shock. When labeled, (A) can also be used diagnostically to measure serum levels of HDL, in particular the HDL subpopulation that is involved in retrograde cholesterol transport, also to image HDL at e.g. atherosclerotic streaks, and to raise antibodies. Y18934 to Y19187 represent lecithin:cholesterol acyltransferase (LCAT) activity exhibiting core peptides, which are apoA-I agonists.
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Lecithin:cholesterol acyltransferase activation exhibiting peptide #256.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes an agonist (A) of apolipoprotein A-I (apoA-I) which is a 14-22 residue peptide, or analog, that forms an amphipathic alpha-helix in presence of lipids. (A), and their lipid complexes, are used to treat or prevent diseases associated with dyslipidemia, specifically hypercholesterolaemia, cardiovascular disease, atheroscierosis, restenosis, HDL (high density lipoprotein) or apoA-I deficiency; hypertriglyceridemia and metabolic syndrom, also for treating septic shock. When labeled, (A) can also be used disgnostically to measure serum levels of HDL, in particular the HDL subpopulation that is involved in retrograde cholesterol transport, also to image HDL at e.g. atherosclerotic streaks, and to raise antibodies. X18680 to X18933 represent lecithin:cholesterol acyltransferase (LCAT) activity exhibiting core peptides, which are apoA-I agonists.
                                                                                                                                                                    Apolipoprotein A-I; agonist; dyslipidemic disorder; dyslipidemia; human: lecitihin:cholesterol acyltransferase; LCAT; hypercholesterolaemia; cardiovascular disease; atherosclerosis; restenosis; HDL; apoA-I; high density lipoprotein; hypertriglyceridemia; metabolic syndrome;
                                                                                                                                                 Lecithin: cholesterol acyltransferase activation exhibiting peptide #256.

(A), optionally as a complex with lipids, and host calls that contain (A), are useful for gene therapy, or prevention, of diseases associated with dyslipidemia, specifically hypercholesteroleemia, cardiovascular disease, atherosclerosis, restenosis, HDL (high density lipoprotein) and apoA-1 deficiency, hypertriglyceridemia and metabolic syndrome, also to treat endotoxemia (septic shock). Host cells containing (A) can also be used to study the role of apoA-1 in lipid metabolism. (B) can be used diagnostically, e.g. to measure serum HDL (particularly its subpopulation involved in retrograde cholesterol transport) and for imaging the circulatory system or HDL accumulations at fatty streaks. The present sequence represents a peptide from the present invention.
                                                              Lecithin:cholesterol acyltransferase activation exhibiting peptide #256.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                               Gene therapy; apolipoprotein A-I; agonist; dyslipidemic disorder; ApoA-I; cardiovascular disease; atherosclerosis; restenosis; LCAI; hyperlipidemia; septic shock; lecithin:cholesterol acyltransferase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1;

-I- FUNCTION: IMPORTANT IN GENETIC RECOMBINATION, DNA REPAIR, AN REPLICATION. POSSESSES PAIRING AND STRAND-TRANSFER ACTIVITY. INTERACTS WITH DDA AND GENE 32 PROTEINS.
-I- SIMILARITY: BELONGS TO THE RECA-LIKE PROTEINS FAMILY.
                             ATP-binding.

UNKNOWN PROTEIN FROM 2D-PAGE OF EPIDERMAL KERATINOCYTES
                                                                          "Identification of tissue-specific isoforms for subunits Vb and VI:
of cytochrome c oxidase isolated from rainbow trout.";
Eur. J. Blochem. 221:111-1116(1994).
-I- FUNCTION: THIS PROTEIN IS ONE OF THE NUCLEAR-CODED POLYPEPTIDE CHAINS OF CYTOCHROME C OXIDASE, THE TERMINAL OXIDASE IN MITOCHONDRIAL ELECTRON TRANSPORT.
-I- CATALYTIC ACTIVITY: 4 FERROCYTOCHROME C + O(2) = 2 H(2)0 +
                                                                                                                                                                                                                                                                                                                                                                             Oncorhynchus mykiss (Rainbow trout) (Salmo gairdneri).

Krishna R.G., Chin C.C.O., Wold F.;
"N-terminal sequence analysis of N alpha-acetylated proteins afte
unblocking with N-acylaminoacyl-peptide hydrolase.";
anal. Biochem. 199:45-50(1991).

-!- FUNCTION: THIS ENZYME CATALYZES THE HYDROLYSIS OF THE AMINO-
TERMINAL PEPTIDE BOND OF AN N-ACETYLATED PEPTIDE TO GENERATE
AN N-ACETYLATED AA AND A PEPTIDE WITH A FREE AMINO-TERMINUS.
IT PREFERENTIALLY CLEAVES OFF AC-ALA, AC-MET AND AC-SER.

hemocyanin chain Ia - Japanese spiny lobster (fragment)
C;Species: Panulirus Japonicus (Japanese spiny lobster)
C;Date: 31-Dec-1988 #sequence_revision 31-Dec-1988 #text_change 01-Aug-1997
C;Accession: S00492
R;Makino, N.; Kimura, S.
Bur. J. Biochem. 173, 423-430, 1988
Eur. J. Biochem. 173, 423-430, 1988
A;Title: Subunits of Panulirus Japonicus hemocyanin. 1. Isolation and proper A;Reference number: S00492; MUID:88196131
A;Accession: S00492
A; Molecule type: protein A; Residues: 1-20 < MAK> C; Superfamily: hemocyanir
